

Are you looking for an exciting job, in a high tech environment? And would you like to work for one of the most innovative companies in the Netherlands? Elestor has a job opportunity for:

## Production & Service Technician

As Production & Service Technician, you play an important role in the assembly and maintenance of Elestor's Hydrogen Bromine Flow Battery storage systems. Having a background in Electrical and/or Mechanical Engineering, your primary responsibility will be to assemble and produce state-of-the-art storage systems for electrical energy. Furthermore, you will be involved in cases whereby Elestor's storage systems, installed at customer's site, need repair or maintenance. You will be supported by a strong team of highly-skilled engineers

### We ask:

- MTS educational level in Electrical or Mechanical Engineering.
- Experience with assembly, production and test of electric and/or electronic and/or mechanical systems.
- Typical all-round and hands-on personality.
- Systematic and accurate working attitude.
- Strong communication skills with scientists/engineers of various disciplines.
- Willingness to travel internationally (occasionally).
- A pro-active mindset.
- International experience, fluency in English.

### We offer:

Elestor offers a positive, R&D focused working environment with many opportunities to use and improve your skills. We offer competitive terms of employment and a professional and exciting company atmosphere in an industry, which has the technology to play a decisive role in realizing the energy transition towards a 100% clean electricity supply.

## About Elestor

Elestor develops a revolutionary low-cost flow battery, thereby reducing the costs for storing electricity to an absolute minimum. To realize this, low cost and abundant active materials (hydrogen and bromine) are used, as well as a compact and easy to manufacture cell, and a (patented) simplified system design. This triple cost reduction strategy results in the lowest possible cost for storing electricity.

The first cells are operational and being tested in the Elestor laboratories in Arnhem, the Netherlands. A growing and enthusiastic team is working hard on maturing this technology in anticipation of its commercial launch in 2016.

## Want to know more ?

Are you creative ? Are you passionate about sustainable energy? Do you have the right pioneering mindset to work in a start-up company ? Then we want to talk to you ! Please send your application with motivational letter and resume to [info@elestor.nl](mailto:info@elestor.nl)
